Claims 1-8 (canceled)

Claim 9 (previously presented): An exhaust aftertreatment combined filter and catalytic converter comprising a plurality of flow channels each having both: a) a flow-through channel catalytically reacting with exhaust; and b) a wall-flow channel trapping particulate, wherein said exhaust aftertreatment combined filter and catalytic converter comprises a plurality of sheets, at least one of which comprises a filter media sheet, said sheets defining said plurality of flow channels, including flow-through channels catalytically reacting with said exhaust and including wall-flow channels in the same said flow channels as said flow-through channels and passing exhaust through said filter media sheet and trapping particulate thereat, wherein exhaust flows axially through said exhaust aftertreatment combined filter and catalytic converter, and wherein said flow-through channels and said wall-flow channels have axially overlapped channel sections in said flow channels, and wherein exhaust flows axially through said exhaust aftertreatment combined filter and catalytic converter from an upstream end to a downstream end, said filter media sheet has a first face facing upstream and has a second face facing downstream, each said flow-through channel has a portion extending downstream from said second face of said filter media sheet, and wherein said exhaust aftertreatment combined filter and catalytic converter comprises first, second and third serially sequential surfaces in each said flow channel, wherein said exhaust flows firstly along and through said first sequential surface, then secondly along and through said second sequential surface, then thirdly along said third sequential surface, wherein said first face of said filter media sheet is said first sequential surface, said second face of said filter media sheet is said second sequential surface. and said overlapped section of said flow-through channel is said third sequential surface.

Appl. No. 10/075,035

Amendment dated May 5, 2006

Reply to Office action of March 17, 2006

Claim 10 (original): The exhaust aftertreatment combined filter and catalytic converter according

to claim 9 wherein at least one of said first, second and third serially sequential surfaces is

catalytically treated.

Claim 11 (original): The exhaust aftertreatment combined filter and catalytic converter according

to claim 10 wherein each of said first, second and third serially sequential surfaces is catalytically

treated.

5

10

15

Claim 12 (previously presented): An exhaust aftertreatment combined filter and catalytic converter

comprising a plurality of flow channels each having both: a) a flow-through channel catalytically

reacting with exhaust; and b) a wall-flow channel trapping particulate wherein said exhaust

aftertreatment combined filter and catalytic converter comprises a plurality of sheets, at least one of

which comprises a filter media sheet, said sheets defining said plurality of flow channels, including

flow-through channels catalytically reacting with said exhaust and including wall-flow channels in

the same said flow channels as said flow-through channels and passing exhaust through said filter

media sheet and trapping particulate thereat, wherein exhaust flows axially through said exhaust

aftertreatment combined filter and catalytic converter, and wherein said flow-through channels and

said wall-flow channels have axially overlapped channel sections in said flow channels, and

wherein exhaust flows axially through said exhaust aftertreatment combined filter and catalytic

converter from an upstream end to a downstream end, said filter media sheet has a first face facing

upstream and has a second face facing downstream, each said flow-through channel has a portion

extending upstream from said first face of said filter media sheet, and wherein said exhaust

aftertreatment combined filter and catalytic converter comprises first, second and third serially

sequential surfaces in each said flow channel, wherein said exhaust flows firstly along said first

sequential surface, then secondly along and through said second sequential surface, then thirdly

along and through said third sequential surface, wherein said portion of said flow-through channel

Reply to Office action of March 17, 2006

is said first sequential surface, said first face of said filter media sheet is said second sequential

surface, and said second face of said filter media sheet is said third sequential surface.

Claim 13 (original): The exhaust aftertreatment combined filter and catalytic converter according

to claim 12 wherein at least one of said first, second and third serially sequential surfaces is

catalytically treated.

Claim 14 (original): The exhaust aftertreatment combined filter and catalytic converter according

to claim 13 wherein each of said first, second and third serially sequential surfaces is catalytically

treated.

20

5

10

Claim 15 (previously presented): An exhaust aftertreatment combined filter and catalytic converter

comprising a plurality of flow channels each having both: a) a flow-through channel catalytically

reacting with exhaust; and b) a wall-flow channel trapping particulate wherein said exhaust

aftertreatment combined filter and catalytic converter comprises a plurality of sheets, at least one of

which comprises a filter media sheet, said sheets defining said plurality of flow channels, including

flow-through channels catalytically reacting with said exhaust and including wall-flow channels in

the same said flow channels as said flow-through channels and passing exhaust through said filter

media sheet and trapping particulate thereat, wherein exhaust flows axially through said exhaust

aftertreatment combined filter and catalytic converter, and wherein said flow-through channels and

said wall-flow channels have axially overlapped channel sections in said flow channels, and,

wherein the combination of said flow-through channels and said wall-flow channels have three

catalytically treated surfaces in each said flow channel.

Claim 16 (original): The exhaust aftertreatment combined filter and catalytic converter according

to claim 15 wherein exhaust flows axially through said exhaust aftertreatment combined filter and

catalytic converter from an upstream end to a downstream end, said filter media sheet has a first

face facing upstream and has a second face facing downstream, each said flow-through channel has

a portion extending downstream from said second face of said filter media sheet, said three

catalytically treated surfaces comprise first, second and third serially sequential surfaces, wherein

said exhaust flows firstly along and through said first sequential catalytically treated surface, then

secondly along and through said second sequential catalytically treated surface, then thirdly along

said third sequential catalytically treated surface, and wherein said first face of said filter media

sheet is said first sequential catalytically treated surface, said second face of said filter media sheet

is said second sequential catalytically treated surface, and said overlapped section of said flow-

through channel is said third sequential catalytically treated surface.

Claim 17 (original): The exhaust aftertreatment combined filter and catalytic converter according

to claim 15 wherein exhaust flows axially through said exhaust aftertreatment combined filter and

catalytic converter from an upstream end to a downstream end, said filter media sheet has a first

face facing upstream and has a second face facing downstream, each said flow-through channel has

a portion extending upstream from said first face of said filter media sheet, said three catalytically

treated surfaces comprise first, second and third serially sequential surfaces, wherein said exhaust

flows firstly along said first sequential catalytically treated surface, then secondly along and

through said second sequential catalytically treated surface, then thirdly along and through said

third sequential catalytically treated surface, and wherein said portion of said flow-through channel

is said first sequential catalytically treated surface, said first face of said filter media sheet is said

second sequential catalytically treated surface, and said second face of said filter media sheet is said

third sequential catalytically treated surface.

Claims 18-90 (canceled)

Claim 91 (previously presented): The exhaust aftertreatment combined filter and catalytic

converter according to claim 9 wherein exhaust flows axially along an axial flow direction along an

Page 5 of 12

Appl. No. 10/075,035 Amendment dated May 5, 2006

Reply to Office action of March 17, 2006

axis, and wherein said sheets comprise first, second and third sheets, said second sheet being

pleated and forming with said first sheet a plurality of axially extending flow channels, said second

sheet having a plurality of pleats defined by wall segments extending in alternating manner between

pleat tips at axially extending bend lines, the pleat tips on one side of said second sheet being

contiguous relation with said first sheet, said third sheet having a plurality of pleats defined by wall

segments extending in zig-zag manner between pleat tips at transversely extending bend lines

which extend transversely to said axis and transversely to said first sheet, said first sheet extending

axially and extending laterally relative to said transversely extending bend lines of said pleat tips of

said third sheet.

10

Claim 92 (previously presented): The exhaust aftertreatment combined filter and catalytic

converter according to claim 91 wherein said axis and said transverse extension of said pleat tips of

said third sheet and said lateral extension of said first sheet are all orthogonal relative to each other.

Claim 93 (previously presented): The exhaust aftertreatment combined filter and catalytic

converter according to claim 12 wherein exhaust flows axially along an axial flow direction along

an axis, and wherein said sheets comprise first, second and third sheets, said second sheet being

pleated and forming with said first sheet a plurality of axially extending flow channels, said second

sheet having a plurality of pleats defined by wall segments extending in alternating manner between

pleat tips at axially extending bend lines, the pleat tips on one side of said second sheet being

contiguous relation with said first sheet, said third sheet having a plurality of pleats defined by wall

segments extending in zig-zag manner between pleat tips at transversely extending bend lines

which extend transversely to said axis and transversely to said first sheet, said first sheet extending

axially and extending laterally relative to said transversely extending bend lines of said pleat tips of

said third sheet.
